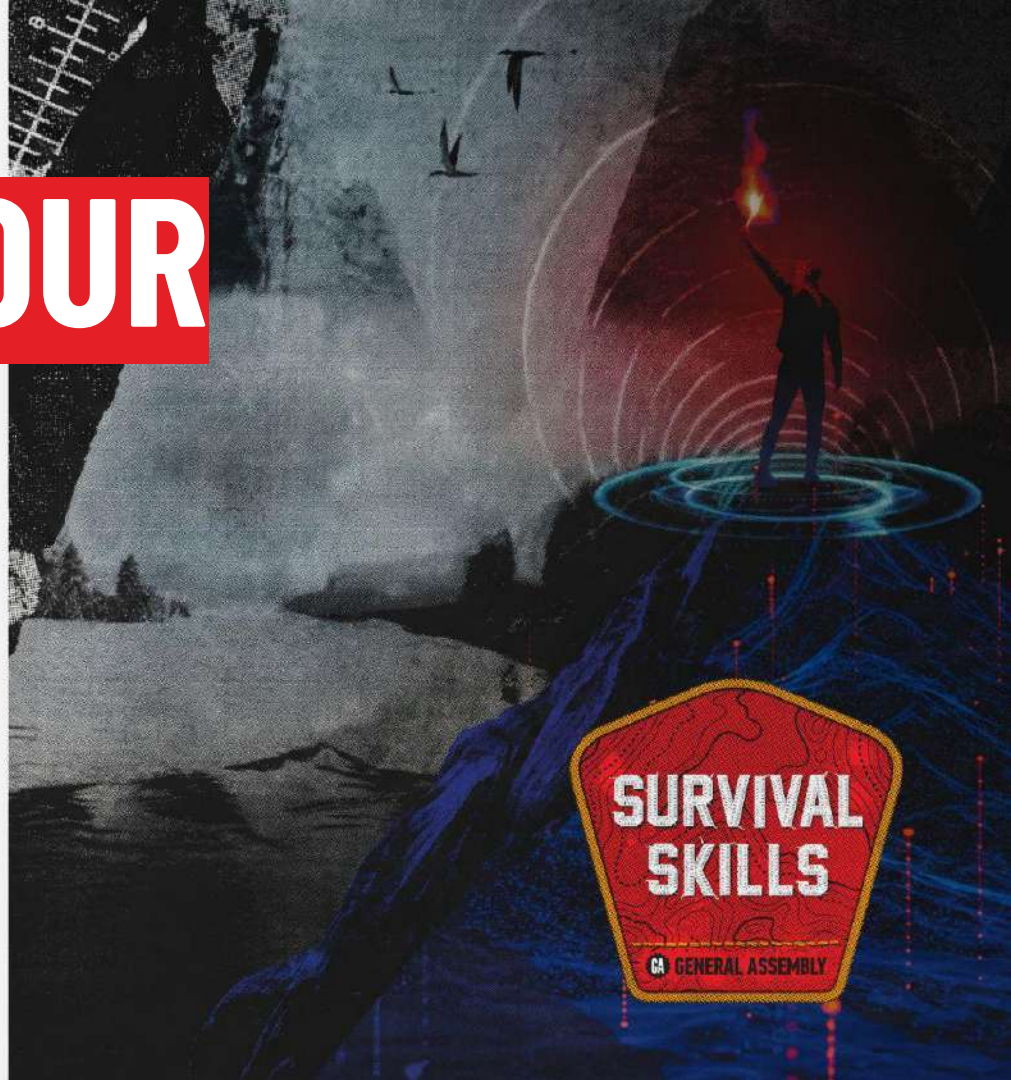
POWER UP YOUR MARKETING WITH AI

SKILLS ARE YOUR SURVIVAL - FREE CLASS SERIES



Course Roadmap

- Warm up + Welcoming
- On The Agenda
- Generative AI impact and LLM
- Leveraging AI
- Q&A
- Survey+ Closing

General Assembly

General Assembly is at the **forefront of tech talent development**, specialising in today's most in-demand skills.

We **train and connect diverse tech talent** directly to employers looking to **fill their talent needs.**

CONTENT AREAS

- Engineering & Development
- Data & AI
- Product & UX
- Digital Marketing

FAST FACTS

- **110K+** global alumni
- **25,000+** employees of Fortune 500 companies trained in **20+** countries
- **Flagship campuses** in New York & Singapore + global virtual learning in **over 50** markets
- A brand of the **Adecco Group**, the world's foremost provider of staffing, career transition and talent development solutions.

US Financing Options

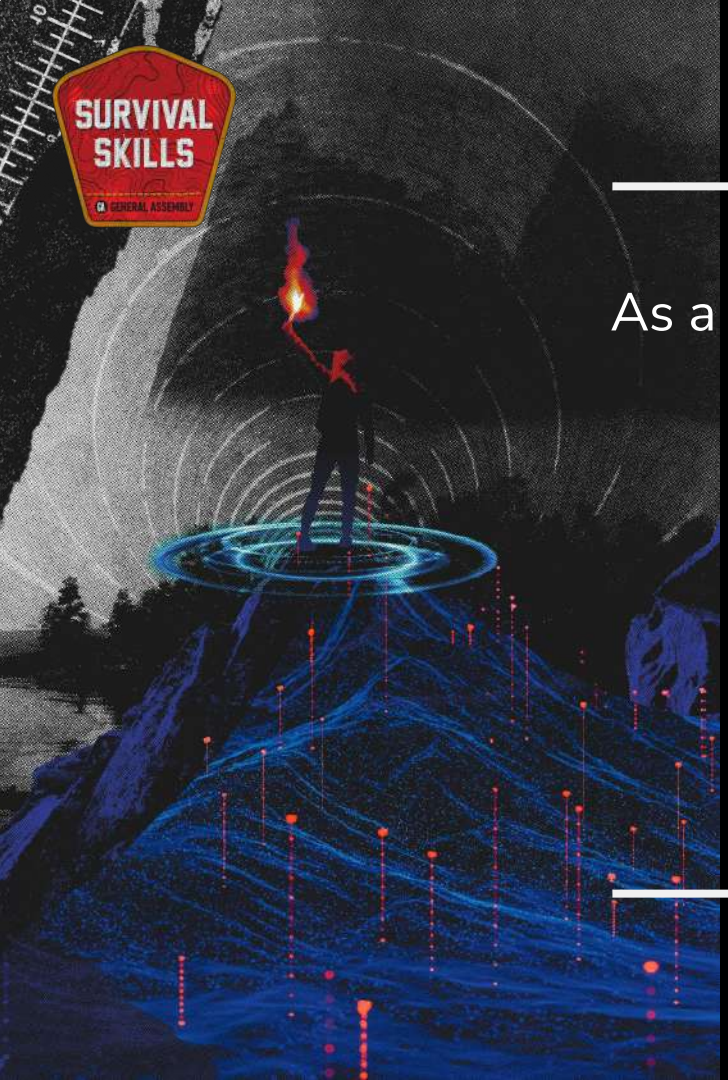
Options vary by region. Talk to admissions to see what you qualify for.

Installments Divide tuition into three easy payments.

Loans Apply for a loan from one of our high-quality lenders.

Full Tuition Save on tuition by paying in full upfront.

Scholarships Our admissions team will help you determine if you're eligible for a scholarship.



As a thank you for joining us today, we're offering:

$25 off a workshop with code Survive26

+ No application fee for new AI courses

Enroll by May 15, 2026

Terms & conditions apply. Discount amount varies based on region and course selected.
Mention Survival Skills when you speak to Admissions to redeem for a course.

Before we get started...

Some quick reminders

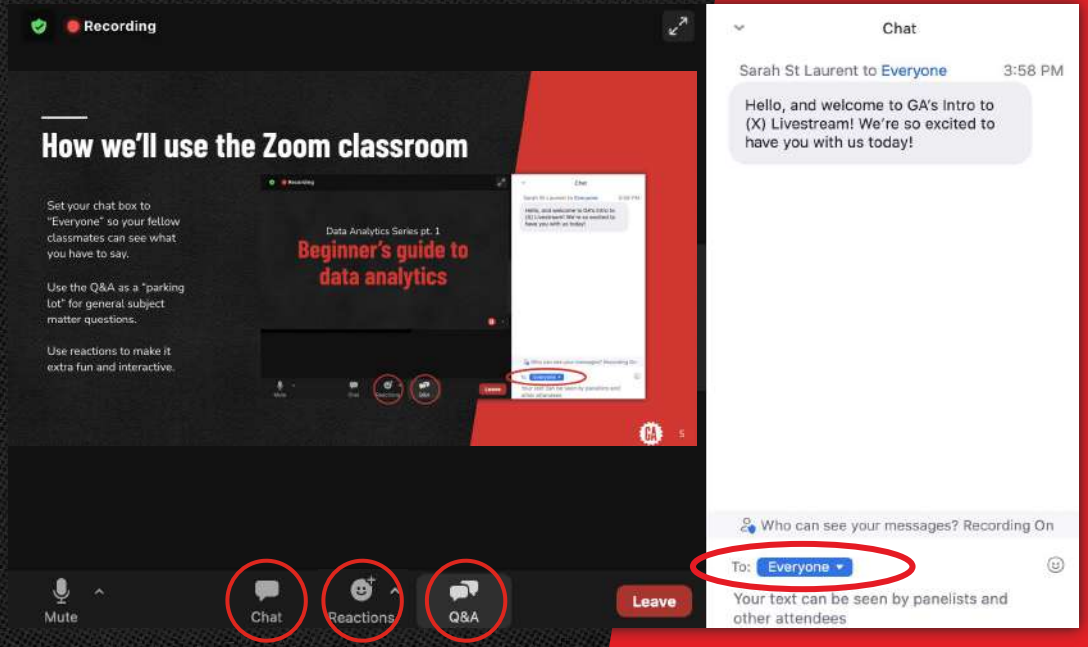
- This is a beginner-level class.
- There will be time for live Q&A at the end.
- YES—we're recording. You'll get the recording from the class via email within 3-5 business days.

How we'll use the Zoom classroom

Set your chat box to "Everyone" so your fellow classmates can see what you have to say.

Use the Q&A as a "parking lot" for general subject matter questions.

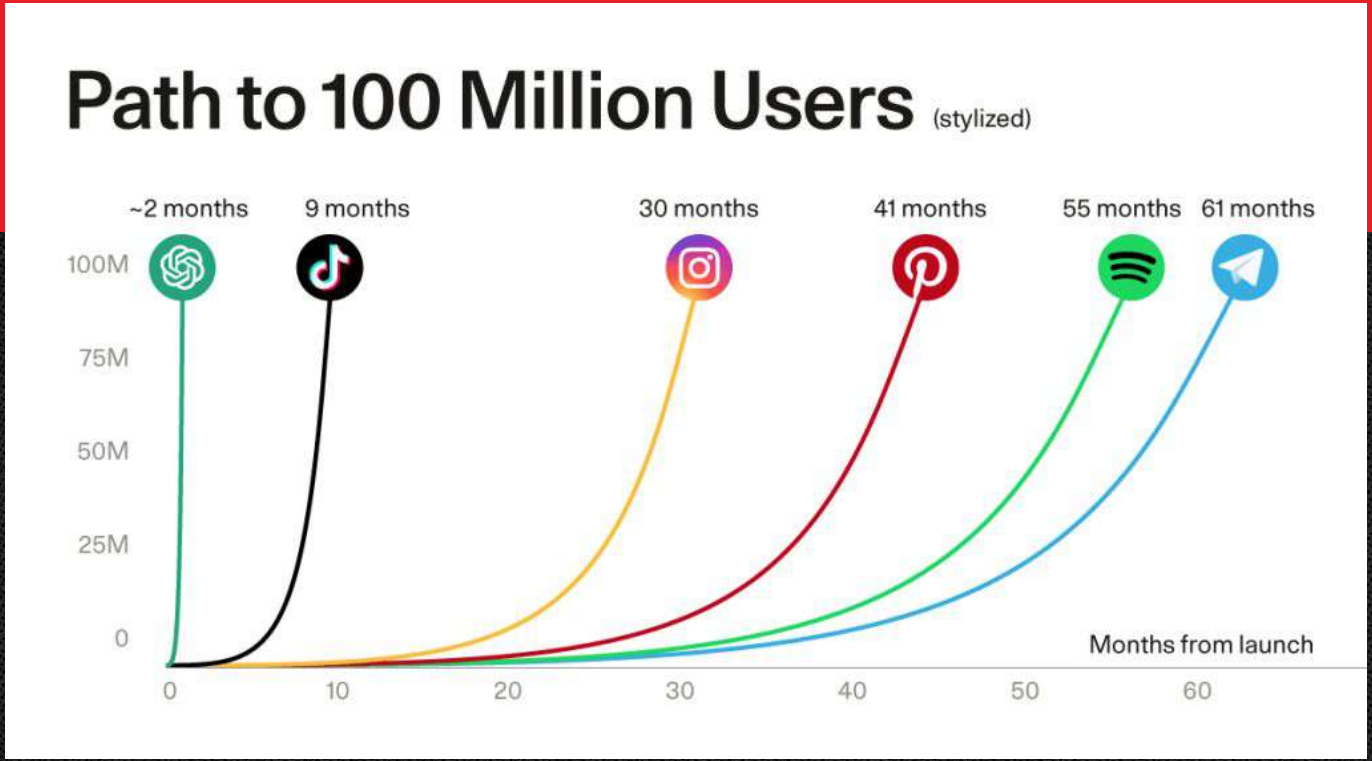
Use reactions to make it extra fun and interactive.



Now that we got that out of the way, let's dive in.

Large Language Models Explained.

Why now ? The incredible growth of ChatGPT



AI is quite possibly the most important – and best – thing our civilization has ever created, certainly on par with electricity and microchips, and probably beyond those.

Marc Andreessen, Co-founder
Andreessen Horowitz

15

AI is a Broad Category

Artificial Intelligence : Any technique that enables computers to mimic human intelligence, using logic, if-then rules, decision trees and machine learning (including deep learning.

Machine Learning : A subset of AI that include abstruse statistical techniques that enable machines to improve at tasks with experience. The category includes deep learning.

Deep Learning : The subset of machine learning composed of algorithms that permit software to train itself to perform tasks, like speech and image recognition, by exposing multilayered neural networks to vast amounts of data.

What is AI?

Artificial Intelligence (AI) is a complex computer program designed around data and pattern recognition.

AI is not a robot that can think for itself.
It cannot make decisions or understand anything outside of its own data set.

Example

- If an AI is programmed on data that only includes recipes for cookies, if you ask it to give you a recipe for soup, it will only use the ingredients it has for cookies.

What is AI (And what is not) ?

AI is

- A tool that leverages **pattern recognition** in a data set to provide answers
- An assistive tool
- Able to make recommendations
- Guided by its programming and training

AI is not

- A tool that can think outside of its own data set
- A replacement tool
- Able to take accountability for its responses
- Guided by morals or intuition

What is Machine Learning?

Math and statistics that allow you to predict trends from historical data.

Analytics can show what *did* happen;
Machine learning allows you to mathematically estimate what *might* happen.

What can Machine Learning determine ?

Icon Here

Classification

Is this A
Or
B ?

Icon Here

Anomaly Detection

Is this Weird?

Icon Here

Regression Analysis

How much/How many?

Icon Here

Unsupervised Learning
(e.g., clustering)

How is it organized?

Icon Here

Reinforcement learning

What should i do next?

3 Major Machine Learning Categories (Banking Example)

1

Supervised Learning

Predict credit worthiness of credit card holders:

Build a machine learning model to look for delinquency attributes by providing it with data on delinquent and non-delinquent customers.

2

Unsupervised Learning

Segment customers by behavioral characteristics:

Survey prospects and customers to develop multiple segments using clustering.

3

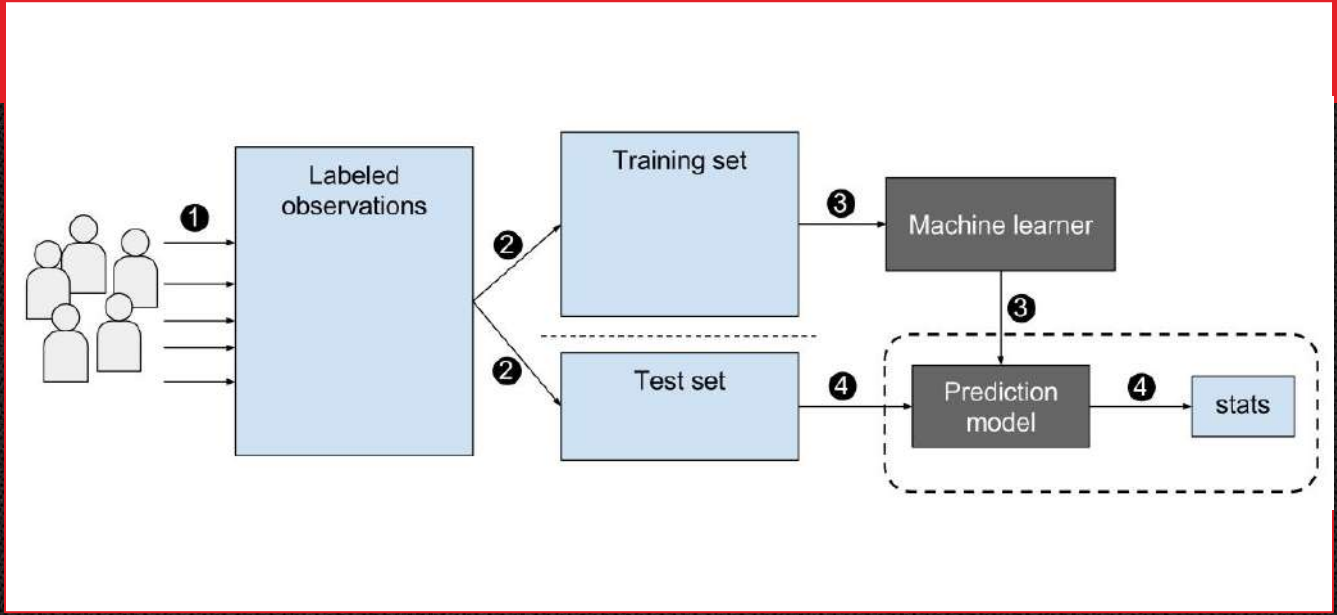
Reinforcement Learning

Create a 'next best offer' model for the call center group:

Build a predictive model that learns over time as users
accept or reject offers made
by the sales staff.

Supervised Learning

Supervised learning is done with a ground truth, giving the algorithm prior knowledge of what the output values for the data should be.



Popular Tools

Platform	System	Models	Features	Cost
OpenAI Backed by Microsoft	ChatGPT	GPT 5	Fast, cheap	Free
	ChatGPT Plus /Enterprise	GPT 4-V/o DALL•E 3	Code, web, multimodal	$20/month
	Playground	Multiple	Tweak Parameters	$5+ PAYG
Microsoft Powered by OpenAI	CoPilot, Bing AI *(Creative Mode)*	GPT 4-V DALL•E 3	Internet, Multimodal	Free
Anthropic Backed by Amazon	Claude AI	Sonnet 3.7	Large Documents	Free or $20/month
Google	Gemini	Gemini	Connect to Gmail, Drive	Varies

Meeting Summaries

Take Caution

Samsung used AI to generate meeting minutes. This resulted in a leak of proprietary information about their semiconductors.

The Pressure is real, So is this opportunity.

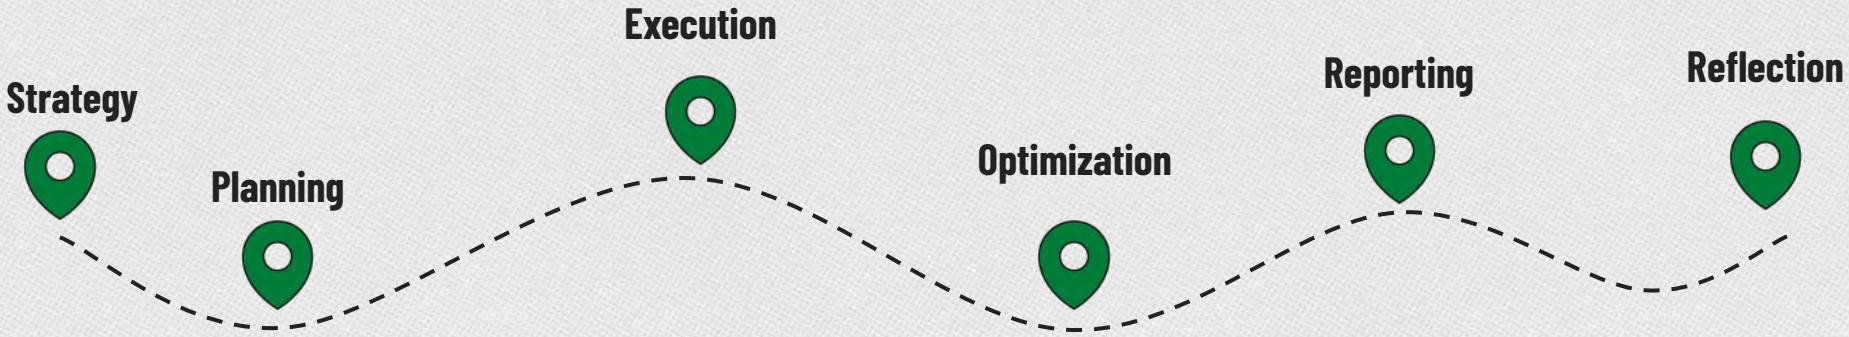
Pain Points :

- ⏱️ Constant time pressure
- 📈 High content demands
- 🔍 Slow insight-gathering
- 💡 Pressure to innovate
- 🤖 Fear of being replaced by AI.

Goal?

Learn how to use AI to be **faster, smarter, and more strategic**— not just keep up, but lead. 🚀🧠✨

But the skills you will learn can be applied *EVERYWHERE*



Types of AI Tools in Marketing

AUTOMATION

🧠 Discriminative AI (Predictive)

Analyzes patterns to forecast outcomes.

Use in Marketing:
Predictions, audience segmentation, lead scoring

🛠️ Discriminative AI (Prescriptive)

Recommends actions based on predictive data.

Use in Marketing:
Budget, content, personalized campaign flows

AUGMENTATION

✍️ Generative AI

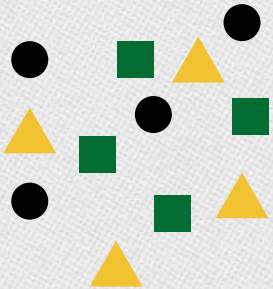
Produces new content like text, images, or video.

Use in Marketing:
Campaign slogans, email copy, social posts, visual ads

This course focuses mostly on <u>generative AI</u>

How a Predictive & Prescriptive (aka Discriminative AI) **Work**

Pattern Recognition in Data

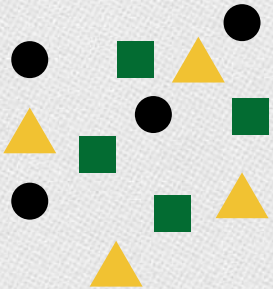


Classification / Categorization

Circles are black; triangles are yellow; squares are purple.

How a Generative AI Works

Pattern Recognition in Data



Classification / Categorization

Circles are black; triangles are yellow; squares are purple.

Pattern Recognition in Sequence

Once upon a time, there were three little pigs who set out to build their own houses. The first little pig built his house out of straw. The second little pig built his house out of sticks. The third little pig built his house out of bricks.

Probability & Relationships of Sequence

If the word “house” appears, then “out of” is likely to be the next two words after it.

What AI Can Do in Marketing

- ➔ Generate campaign themes, slogans, and content ideas
- ➔ Write first drafts of emails, blogs, and social posts
- ➔ Personalize content for different audiences and platforms
- ➔ Repurpose existing content into new formats
- Summarize marketing insights, trends, or competitor activity

What AI Can't or Shouldn't Do in Marketing

- ➔ Replace human creativity or strategic judgment
- ➔ Guarantee brand safety, tone, or legal compliance
- ➔ Understand emotional nuance or cultural context automatically
- ➔ Remove bias or stereotypes without human review
- ➔ Decide final campaign direction without marketer oversight

Key takeaways

AI can automate some things in Marketing, and augment many others

AI tools are powerful partners for Marketing professionals

AI doesn't remove bias, judgment, or responsibility

LLMs are designed to be useful for everyone

PROMPT ENGINEERING

helps the tool work for YOU

What do we need to know about Large Language Models (LLMs) ?

Trained on vast amounts of **internet text**—hundreds of billions of words

Outputs are **fluent**, **but not always accurate**

Doesn't understand context or meaning like a human

Not connected to live data or internal company systems

They work by **predicting the most likely next word** in a sentence

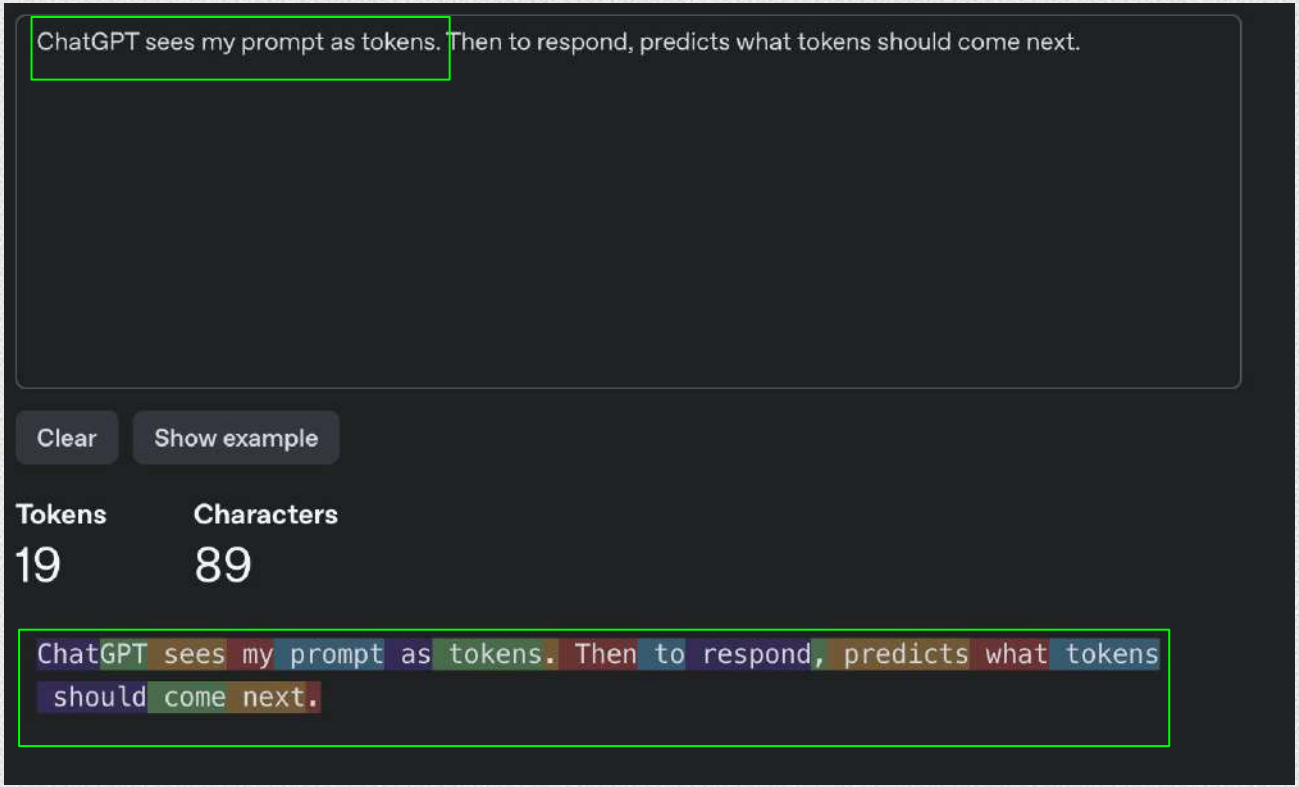
How ChatGPT Understands and Responds



https://platform.openai.com/tokenizer

Why Prompting Matters

*This prompt gives more **structure and signal** to the model.*

Less Effective Prompt

"Tell me about marketing."

Tokens	Characters
5	24

Tell me about marketing.

More Effective Prompt

"Act as a CMO. Summarize 3 marketing trends in Gen Z fashion, with examples."

Tokens	Characters
22	77

Act as a CMO. Summarize 3 marketing trends in Gen Z fashion, with examples.

What is the right

MINDSET

to have when working with an LLM?

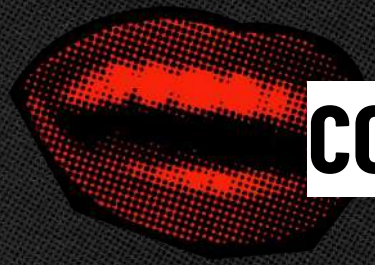
Think of ChatGPT as:

An assistant who has read everything useful on the internet, but only remembers it vaguely.

➔ It's fast, confident, and helpful—but it:

- Can make things up (a.k.a. hallucinate)
- Misses nuance unless prompted carefully
- Benefits from context and follow-up

Evaluate LLMs Output



CONSTANTLY EVALUATE OUTPUTS

Research has shown that quality of work can actually **DECREASE** when someone works with a high-performing model.

Researchers refer to this as “falling asleep at the wheel.”

Source

Never

FALL ASLEEP

at the wheel!

1

High-performing AI **can lower your guard**

2

Users of better AI are **more likely** to accept errors

3

Critical thinking must **increase**, not decrease

4

Marketers must **partner** with AI, not hand it the keys

AI User Implications - Bias and Fairness

1

Language models like ChatGPT are trained on vast amounts of text data.

2

Biases from the text data can be reflected in the model's responses.

3

Users must understand this, and be wary of unfair or discriminatory outputs.

FIVE PILLARS OF ETHICAL AI

EXPLAINABILITY

How and why does it arrive at a particular outcome?

FAIRNESS

Does it treat individual groups equitably?

ROBUSTNESS

Can it handle exceptional conditions?

TRANSPARENCY

Is enough info shared on how it was designed or developed?

PRIVACY

Does it prioritize and safeguard human privacy and data rights?

Ethics of AI in Marketing

⚖️ **Bias & Fairness**	Algorithms can reinforce stereotypes (e.g., gendered or exclusionary language).
🔍 **Transparency**	Can your team explain how a campaign message or recommendation was created?
🔐 **Privacy**	What employee data is used to train AI?
🛋️ **Accountability**	Who is responsible if AI content misrepresents or harms your brand/audience?

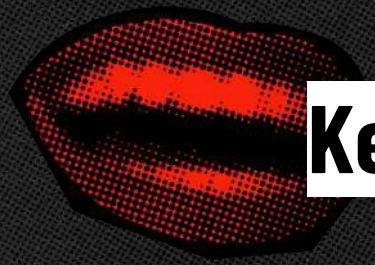
AI will make mistakes... what are the consequences when it does?

AI Legal Implications

Intellectual Property	There are growing concerns over copyright issues since LLMs generate responses based on content previously generated by other individuals.
Data Protection and Privacy	Always take necessary precautions to ensure the protection of sensitive personal data, and compliance with data privacy laws.
Compliance with Industry Regulations	There may be industry specific regulations to consider when using AI tools. For example, **HIPPA** in the healthcare industry.

A Rubric to Evaluate AI Inputs and Outputs

CLAP Rubric	BEFORE YOU ENTER A PROMPT:	AFTER THE LLM RESPONDS:
Confidentiality	Does this prompt include private, sensitive, or personally identifiable information (PII)?	Does the response include or infer any private or sensitive details that shouldn't be there?
Language and Bias	Is the language neutral and respectful? Could it unintentionally reinforce stereotypes or bias?	Does the output contain biased, harmful, or exclusionary language or assumptions?
Accuracy	Am I asking something that's clear, factual, and verifiable?	Are the facts, references, or assumptions in the response accurate and trustworthy?
Property	Am I entering content that belongs to someone else (e.g., proprietary code, copyrighted text)?	Does the response replicate or reuse proprietary, licensed, or copyrighted material?



Key takeaways

Right model, right job

boosts accuracy, speed, and trust

Search, deep-research, canvas

add superpowers in addition to basic model capabilities

Projects

turn ad-hoc chats into reusable Level-5 workflows

AI in Marketing

Leverage AI across different stages of a marketing workflow

The Role of AI in Marketing Ideation

Feature	Traditional Brainstorming	AI Ideation
Input	Human creativity, group dynamics, subjective knowledge	Data, algorithms, patterns, insights
Process	Spontaneous idea generation, discussion, building upon ideas	Data analysis, algorithmic processing, recommendation generation
Output	List of ideas, some unconventional	Data-driven recommendations, insights, potential strategies
Focus	Creativity, exploration of diverse ideas	Data analysis, trend identification, optimization
Strengths	Human intuition, creative exploration, group synergy	Data-driven insights, efficiency, scalability
Weaknesses	Time-consuming, potential for groupthink, may not leverage data effectively	May lack human intuition, struggles with abstract ideas

How to use prompt engineering

Basic and structured

JOB #1 — Generate Innovative Marketing Ideas with AI

Maya's Creative Breakthrough

Maya must pitch a new summer campaign by tomorrow. She's creatively blocked.

Pain Point: Creative block, low ideation efficiency

Solution: Use an LLM to brainstorm and generate campaign ideas

🌱 Maya's Growth — Job #1: Ideation Under Pressure

💡 Growth Moment:

Maya uses AI to generate campaign concepts fast. Instead of waiting for inspiration, she works with the model to surface themes, formats, and angles.

📈 Takeaway:

AI becomes Maya's brainstorming partner. She learns that creativity plus prompting is faster than either alone.

JOB #2 — Content Sprint Under Pressure

From Overwhelmed to On-Time

Maya must launch a product sprint with social, email, and blog content by end of week.

Pain Point: Time Constraint, Creative bottlenecks

Solution: Use an LLM to rapidly generate multi-format content and repurpose it across platforms

⚙️ JOB #2: Content Sprint at Scale

💡 Growth Moment:

Maya stops doing everything herself. She uses AI to generate, format, and repurpose content across multiple platforms.

📈 Takeaway:

AI enables Maya to scale content creation, freeing her to focus on consistency and strategy.

In some ways, LLMs are digital labor.

How you manage that "labor" impacts its effectiveness.

Prompting level 4

Model selection : When to use which one.

Not all AIs are Built the Same

Just like teammates, different AIs are good at different things.

WHY SO MANY MODELS?

AI models are trained on **different data** with **different priorities**

Thus, some are better at **writing clearly**, others excel at **analyzing complex info**

They are like **specialists on your team** – you wouldn't ask a designer to write SQL queries.

Choose the right LLM & Model for the right task:

New LLMs come into the market frequently, and current LLMs update often.

LLM + Model	What it's good for?	Why?	PM Examples
GPT-4o	Conversational AI, multimodal tasks (text, voice, vision), multi-step reasoning, chatbots, content creation.	Excels at human-like dialogue & supports multiple input types; large context window enables complex conversations (aka, it can take in a lot all at once).	Creating campaign briefs with visual mockups, developing buyer personas from interview transcripts, or generating multi-channel campaign concepts with supporting creative assets.
Claude 3.5 Sonnet	Long-form document processing, coding, conversational AI	Very large context window (200,000 tokens) allows handling of lengthy documents and in-depth conversations.	Analyzing comprehensive market research reports, creating detailed content marketing strategies with quarterly editorial calendars, or developing integrated campaign playbooks across multiple touchpoints
DeepSeek-R1	Reasoning, long-form content, Retrieval-Augmented Generation (RAG), cost-efficient deployments	Efficient architecture enables strong reasoning and cost savings; open-source for flexibility and speed.	Building attribution models from campaign performance data, creating automated reporting dashboards for marketing ROI, or analyzing customer journey data to optimize conversion funnels
Mistral Large 2	Real-time data processing, coding, multilingual tasks, low-latency applications	Optimized for low latency and fast token generation; outperforms peers in programming tasks and supports multiple languages.	Generating real-time social media responses during product launches, localizing ad copy for international markets while maintaining brand consistency, or creating dynamic email personalization at scale across multiple languages

Choosing the right ChatGPT model for the right task

GPT	4o	o3	4.5
Multimodal	**Excellent** Native support for text, audio, image, and video in real time.	**Not supported**	**Good** Text and image support, but not as seamless as 4o
Speed	**Fastest** Optimized for low latency and real-time interaction	**Fast** Especially at lower reasoning levels; adjustable effort	Can be **slower**, especially on more complex tasks
Depth of Reasoning	**Good** Handles multi-step reasoning across modalities, but not as deep as o3	**Strong** Designed for complex, step-by-step reasoning	**Moderate** Relies on pattern recognition, not chain-of-thought; weaker than o3 for deep reasoning
High-nuance to mimic emotion or creativity	**Moderate** Human-like dialogue, but less emotional nuance than 4.5	**Moderate** Focused on logic and accuracy, not emotional nuance	**Best** Strongest at conversational naturalness, emotional intelligence, and creative writing

GROUP EXERCISE: LLM Battlefield

PM 7. Battle of the LLMs

5 MINUTES

DIRECTIONS

1. In your browser, open up https://lmarena.ai/
   a. Take a moment to orient yourself. Notice that there are tabs long the top. We will be working in the Arena (side-by-side)
2. On the top, click the Arena (side-by-side) tab
   a. Read through **How It Works**
3. Under the **Choose two models to compare**, select two models to test each other.
4. Below the Model A and Model B boxes, you'll see a text field to enter a prompt. From your worksheet, select an prompt and two models to enter into the arena.
5. Compare the responses, and use CLAP to evaluate

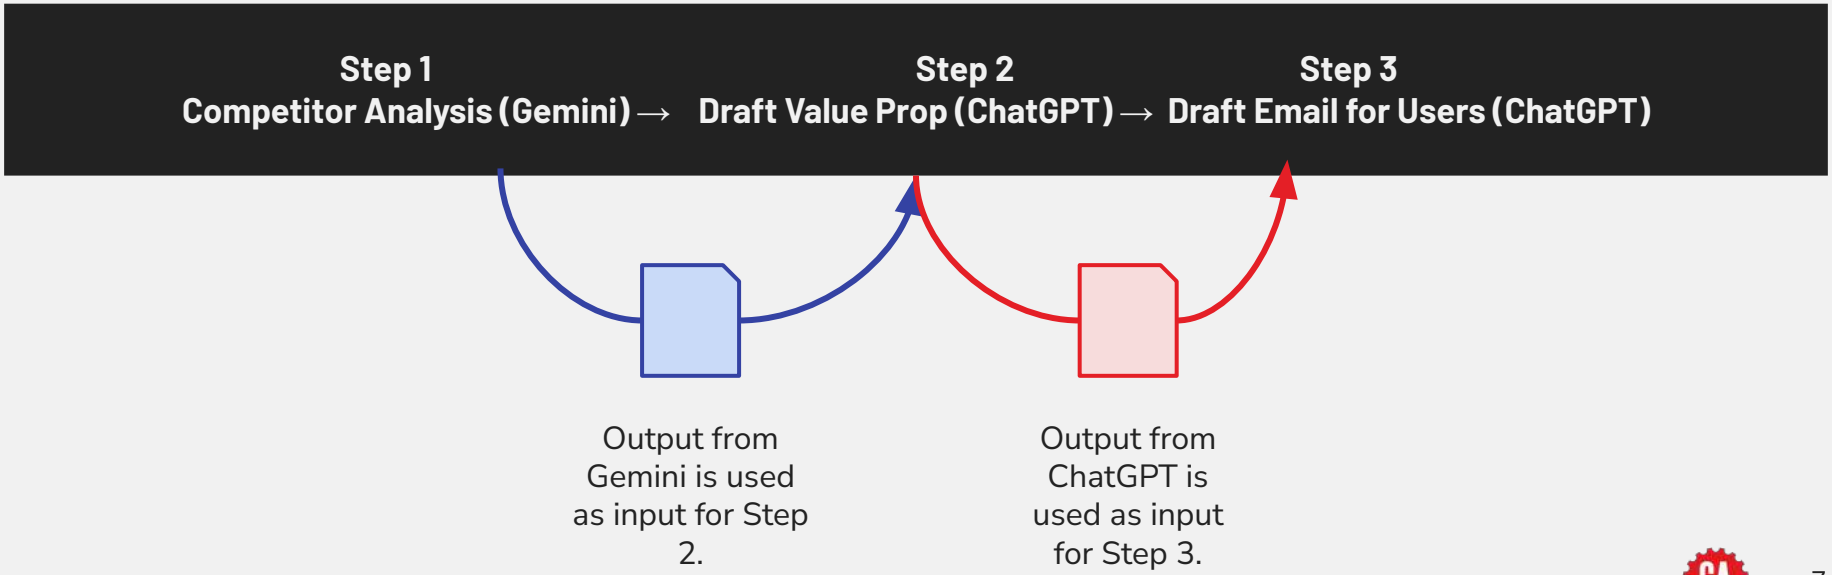
- ☐ What are you noticing about the differences?
- ☐ If the differences aren't noticeable right away, try breaking the LLM based on the model. Example, giving a text model an image.

Use AI to streamline and enhance a multi-step decision-making process

Optimize by prompt-chaining for multitask workflows

Executing Sequence of Tasks: Prompt Chaining

~ process of **linking multiple AI-assisted steps** so the output of one becomes the input of the next



Prompt Chaining: Do's and Don'ts

DO

Use Prompt Best Practices, and...

- Clarify the step's role
  "This is step 2 of 3..."
- Reference previous outputs
  "Based on competitor analysis attached..."
- Specify format, audience, and tone
  "Make this into 3 bullets for exec slide."
- Use transition language
  "Next, using the same positioning..."
- Checkpoint outputs before chaining forward
  "Does this summary reflect themes?"

DON'T

Copy / Paste Output

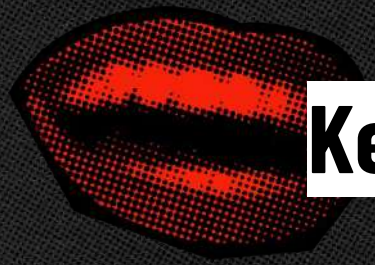
- Assume the AI remembers everything
- Chain prompts without reviewing outputs
- Overload a single prompt with too many goals
- Forget the audience changes across steps
- Let tone or structure drift

Prompt Chain: Prepping for New Feature

5 MINUTES

I am a Marketing Manager preparing for a product launch campaign for a new smartphone camera. I want to develop positioning and create campaign assets. Here's how I would do it:

1. **Prompt 1:** Compare how Apple and Samsung market their flagship phone cameras in their recent campaigns.
2. **Prompt 2:** Using this comparison, develop key messaging pillars for our new smartphone camera feature launch.
3. **Prompt 3:** Create social media ad copy for Instagram using these messaging pillars.



Key takeaways

Right model, right job

boosts accuracy, speed, and trust

Search, deep-research, canvas

add superpowers in addition to basic model capabilities

Projects

turn ad-hoc chats into reusable Level-5 workflows

JOB #3 — Scale SEO Strategy Without Burning Out

From Hidden to Highly Ranked

Maya's content team just wrapped a product sprint — but the pages aren't showing up in search. Leadership is asking: Why aren't we getting traffic?

Pain Point: Manual SEO tasks, time-consuming keyword work, content doesn't rank

Solution: Maya uses LLM tools to analyze, optimize, and revise content for SEO performance—faster and smarter.

🔍 JOB #3: SEO Strategy Revamp

💡 Growth Moment:

Maya uploads draft content into AI and learns to prompt for keyword-rich, intent-driven optimizations that align with brand voice.

📈 Takeaway:

Maya stops guessing and starts optimizing. She uses AI to boost visibility without compromising tone.

Key takeaways

Custom instructions + curated files = context powerhouse.

Projects support iterative, shareable analysis—no re-prompting.

Still need human judgment: validate stats, check anonymity, sense-check recommendations.

JOB #4 — Stay Ahead of the Curve

From Reactive to Insight-Driven

Maya's CMO wants the next campaign to feel "fresh, cultural, trend-forward." But the insights team is swamped, and Maya can't wait weeks for a research brief.

Pain Point: Manual market research takes too long, trend insights arrive too late to act.
Solution: Maya uses AI to rapidly analyze competitor messaging, spot emerging trends, and generate data-backed ideas — turning hours of research into minutes.

📊 JOB #4: Trend Analysis at Speed

💡 Growth Moment:

Maya uses AI to scan competitor content and customer language, extracting real-time trends and insights for campaign planning.

📈 Takeaway:

AI transforms Maya into a strategic thinker, letting her act on insights faster than traditional research allows.

Maya's AI Journey — From Enabled to Strategic Leader

🌱 **Before: Overwhelmed Marketer**

- Constant content pressure
- Limited by time, tools, and team bandwidth
- Unsure where AI fits or how to start

🚀 Maya's Growth Across Jobs-To-Be-Done (JOB)

JOB	Growth Moment	New Capability
#1 Ideation Under Pressure	Uses AI to co-create campaign ideas	Builds creative confidence using prompts
#2 Content Sprint at Scale	Delegates content tasks to LLMs	Scales copywriting across formats
#3 SEO Strategy Revamp	Uploads and optimizes web content with AI	Aligns SEO with voice + visibility
#4 Trend Analysis at Speed	Surfaces competitor insights and audience sentiment	Drives strategy with real-time research

Maya's AI Journey — From Enabled to Strategic Leader

🌟 **After: AI-Augmented Strategist**

- Uses AI for ideation, execution, and optimization
- Leads team workflows with smart tools
- Translates insights into action at speed

🤝 AI is Your Partner, Not a Replacement

Use AI to augment your work, but retain human judgment.

⚖️ Ethics Matter

Stay vigilant about bias, transparency, and privacy—AI requires human oversight.

🚀 Small Steps = Big Impact

Start integrating AI in simple tasks (drafting, summarizing) and grow from there.

🎯 Better Prompts = Better Results

Practice prompt engineering to get more value from Generative AI tools.
